HD Plastic Lockers

As our plastic lockers cannot rust they can be used outdoors in school playgrounds, on oilrigs and ships or in areas with wash down facilities such as abattoirs. The ability to be washed down also makes them popular in hospitals.

The lockers have an attractive appearance and are a very popular choice for swimming pool changing areas or by the poolside, a round version is available for use on beaches.

A fully fire retardant version is also available.

The plastic in these lockers is food grade.

Our unique size of 380mm wide x 500mm deep means that the lockers are big enough for cycle helmets and other items likely to be stored in outdoor lockers.

Available with
1 – 8 doors
